Frequently Asked Questions:

Nintex Products & Innovations for SharePoint 2013

Frequently Asked Questions: Nintex Products and Innovations for SharePoint 2013

What are Nintex's plans for 2013?

More than having plans, we are ready –now. At the SharePoint Conference we've unveiled 2013 versions for Nintex Workflow, Nintex Forms and Nintex Workflow for Project Server. Customers with early plans to transition to SharePoint 2013 are able to move forward with their investments on Nintex products –now. We will follow a regular cadence of upgrades and innovations continuing throughout 2013, with advanced investments in mobile, social, and cloud computing.

How will Nintex leverage mobile, social, and cloud?

The 2013 generation of Nintex products will empower organizations to extend business process automation to more people, places and devices, continuing the Nintex vision of delivering 'Workflow For Everyone'. You can extend workflow to the mobile workforce, use social tools to reinvent business processes, and support cloud-hosted services and scenarios.

How does Nintex work with Yammer?

We are making workflow social: Already integrated with Yammer, Twitter, and Facebook, the Nintex workflow platform will continue to add connectivity and provisioning capabilities to social tools and services. We extend processes to where people actually work. Users can discover processes and participate in tasks directly within social media channels and SharePoint social feeds.

What are the timelines to roll out this first releases for 2013?

This first release wave include:

- Nintex Workflow 2013 will be available for sale in December 2012
- Nintex Forms 2013 will be available for sale in February 2013
- Nintex Workflow for Project Server will be available in Q1 CY 2013
- Nintex apps for Windows 8, iPhone and iPad will be available in Q1 CY 2013

What is Nintex Workflow Online (Preview)?

It is an app for SharePoint Online, in the Office Store. Nintex Workflow Online (Preview) gives users the ability to design and run workflows in the SharePoint Online, dragging and dropping SharePoint's native actions and connecting to cloud services via Nintex Live. It gives a glimpse of how Nintex Workflow Online will evolve to make Office 365 more productive, automating everything, from reviews and approvals, to sophisticated business processes.

How Does Nintex extend and add value to SharePoint?

Our differentiation is about bringing Workflow for Everyone. Nintex is focused on delivering technology that is powerful, easy to use, and addresses the needs of business users, developers, and IT professionals alike. We are recognized by analysts as the most utilized third party tool for SharePoint. Our customers, partners and the Microsoft community recognize our products are quick and easy to use, pure SharePoint and connected. We extend SharePoint to deliver as a process automation platform. The best way to summarize our added value is listing what users can do:

- Work in SP from start to end, via browser
- Design intuitively, with fewer clicks
- Track, report and analyse everything
- Create and reuse custom actions
- Connect with systems, DBs, web and cloud services
- Expose workflow forms anywhere on any device

With eyes turned to SharePoint 2013, is Nintex still developing for 2010 versions?

Within industry and the SharePoint community all eyes are tuned to the 2013 wave, however we will continue to innovate and develop on previous versions. As a matter of fact, Nintex Workflow 2010 Version 2.3.6 and Nintex Forms 2010 Version 1.2 are released this week. Many of the innovations we're creating for our 2013 products will be retrofitted into our 2010 products.
